

Sustainable Crop Protection Solutions

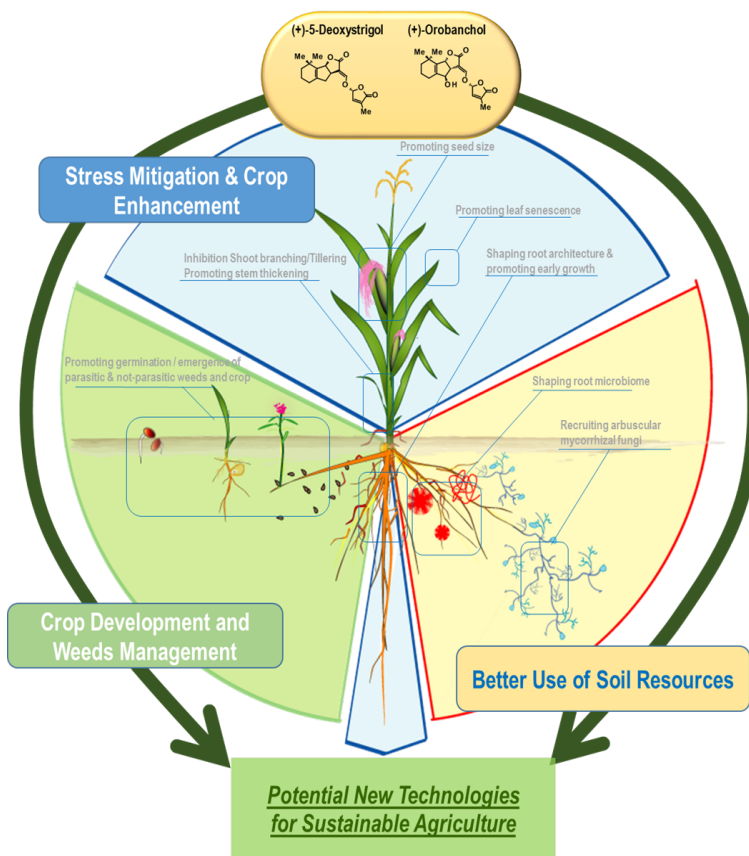

Sarah Sulzer

Syngenta Crop Protection (Stein, 4332, Switzerland)

sarah.sulzer@syngenta.com

Our innovation in crop protection is addressing environmental, societal and economic challenges for a sustainable agriculture.

In this context, we have developed a program in crop protection research to address climate change resilience by exploring plant hormones, which control several physiological and developmental processes in crops. In this presentation, we will illustrate chemical solutions for mitigating abiotic stresses, such as drought or cold.
